

Update regarding the application for use of XyloFerm® in animal feed

Taurus Energy has received confirmation that the application for permission to use XyloFerm® as an ingredient in animal feed has been received by the first instance in the approval process, The Association of American Feed Control Officials (AAFCO). The application will after review by AAFCO be passed on to the US Food and Drug Administration (FDA) which meets twice annually to decide on this type of matters.

If XyloFerm® is approved as a feed component the strain may also be used by ethanol producers who sell their fermentation residues on for use as feed, which is common practice. This increases the number of potential users.

About Taurus Energy AB

Taurus Energy AB is a research and development company, which aims to commercialize its extensive research and development program in the field of ethanol production. Since 2006, the company's mission has been to license energy producers to use the methods developed by the company on a global market. Taurus Energy holds over 10 world-leading patents, which have been developed with the help of around 20 internationally recognized scientists. Taurus Energy is listed on the Aktietorget equities market. For more information, please visit www.taurusenergy.eu
