

Press release 2015-12-14

WntResearch has submitted phase 1b study application

WntResearch today announces that an application regarding permission to start the Foxy-5 clinical phase 1b study has been submitted to the Danish Health Authorities.

Nils Brünner, CEO: *“This is a very important milestone for WntResearch. I feel confident that the phase 1b study will provide us with the information needed to optimize conditions for the pivotal clinical phase 2 study. The major difference between the phase 1 and 1b studies and the phase 2 study lies in the recruitment of patients. The phase 1 and 1b studies recruit patients who already have metastatic disease and for whom the treating oncologist has no more routine systemic treatment to offer. On the contrary, the phase 2 study will recruit only newly operated cancer patients with no signs of persistent metastatic lesions. Thus, the phase 2 study will give us the final answer to the anti-metastatic efficacy of Foxy-5.”*
